

SULTAN BAYU PRASETYO

Jakarta, Indonesia | sultanbp18@gmail.com
[linkedin.com/in/sultanbp](https://www.linkedin.com/in/sultanbp) | github.com/Sultanbayup | Sultanbp.com

Cloud Infrastructure Engineer with 3+ years of experience operating production Kubernetes clusters, reducing cloud costs by up to 60%, and building infrastructure from scratch as a sole engineer. Focused on GCP, Terraform, and platform reliability for enterprise environments.

Experience

PT. Ebconnect Indonesia, Jakarta — *Cloud Engineer*

JUL 2025 - PRESENT

- Reduced monthly cloud spend by 100M IDR within the first quarter by eliminating unused resources, migrating legacy Cloud SQL instances off extended support, and right-sizing compute. Identified and proposed CUD commitments projected to save an additional 50M IDR/month.
- Migrated 5 applications and databases from bare metal to Google Kubernetes Engine and Cloud SQL, containerizing legacy monoliths to improve scalability and disaster recovery readiness.
- Managed HashiCorp Vault for centralized secrets management serving both GKE workloads and on-premises services, enforcing secure credential injection across environments.
- Refactored Terraform modules and deployment standards across 5 GCP projects, improving provisioning consistency and onboarding speed for new workloads.
- Built a merge-request approval workflow using n8n and GitLab comments, enabling multi-reviewer code review gates without GitLab Premium licensing.
- Took over DevOps responsibilities (ArgoCD, Helm, GitLab CI/CD) after team departure, maintaining GitOps workflows for production deployments across a hybrid hub-and-spoke network topology.
- Building an internal cloud infrastructure documentation platform (Docusaurus) to consolidate tribal knowledge, reduce onboarding time for new engineers, and address operational documentation debt.

PT. Magpie Data Indonesia, Remote — *Cloud Infrastructure Engineer*

FEB 2023 - JUN 2025

- Reduced monthly infrastructure costs by approximately 60% (~90M to ~30M IDR) by migrating batch-processing orchestration (Prefect) from always-on VMs to Kubernetes on GKE with spot instances.
- Migrated Apache Airflow workloads to GKE after recurring downtime from resource exhaustion on standalone VMs, eliminating unplanned outages and reducing deployment time by 40%.
- Built and managed a multi-node Proxmox cluster (50+ VMs) across two sites for data collection workloads, provisioned and configured entirely with Ansible.
- Deployed self-hosted ZeroTier network controller (ztnet) providing secure internal connectivity for 50+ VMs and local workstations without recurring VPN licensing costs.
- Built centralized monitoring and alerting using Prometheus, Grafana, Loki, and Alertmanager with automated Discord notifications, reducing incident recovery time by approximately 35%.
- Enforced infrastructure security practices: TLS/HTTPS across all services, self-hosted Passbolt for credential management (10 users), regular IAM access reviews, and least-privilege policies.
- Resolved critical production incidents including database disk exhaustion and storage overflow; implemented automated log rotation and proactive alerting to prevent recurrence.
- Created and maintained operational runbooks covering infrastructure setup, access procedures, and incident response — documentation still actively used by the team after departure.

Education

Diponegoro University — Bachelor of Science in Physics

2018-2022

Education and Certifications

• Google Cloud: Associate Cloud Engineer Certification – Credential	2024
• Alibaba: Cloud Certified Associate – Credential	2024
• Dicoding: AWS Cloud Practitioner Essentials – Credential	2025
• Google Cloud: Professional Cloud Architect Certification – Credential	2026
• Google Cloud: Professional Cloud DevOps Engineer Certification – Credential	2026

Technical Skills

• Cloud & Infrastructure: GCP, AWS, Alibaba Cloud, Proxmox, Virtualization
• Infrastructure as Code: Terraform, Ansible
• Containers & Orchestration: Docker, Kubernetes
• Monitoring & Observability: Prometheus, Grafana, Loki, Alertmanager
• CI/CD & Version Control: GitHub Actions, Jenkins, Git, ArgoCD
• Programming & Query: Python, SQL, Bash
• Operating Systems: Windows, Mac, Linux
